Product Safety Recall

Map-Pro, Propylene, MAPP Gas Cylinders
Manufactured in the USA by Worthington Cylinder, Wisconsin LLC
Batch numbers W *month* D through W *month* L (no I-year), number appears on baseplate of cylinder.

Sold at various plumbing and refrigeration merchants and other industrial outlets.
Distributors of the products to retail chains include Bromic, Primus and Rothenberger.

Defect Complete shut-off of the cylinder valve may be delayed for some minutes following removal of hand/brazing torch from the cylinder.

Hazard The defect will result in leakage of gas from the cylinder. Though remote, these leaks can create a potential risk of fire or explosion. There are no known incidents of fires resulting from these leaks.

What to do

•Unused cylinder (If the cylinder has never been connected to a torch or other device). Do not use cylinder. Return cylinder to store where it was purchased for exchange or a full refund.

•If the cylinder is currently connected to a torch or other device. Do not disconnect the torch or other device. Take outdoors. Ignite the torch and burn off the entire contents of the cylinder. Disconnect torch from empty cylinder. Dispose of empty cylinder per cylinder label instructions or return it to the store where it was purchased for exchange or a full refund.

•If the cylinder has been connected to a torch or other device, but is not connected now. Take cylinder outdoors. Attach torch. Ignite torch and burn off entire contents of the cylinder. Disconnect torch from empty cylinder. Dispose of empty cylinder per cylinder label instructions or return it to the store where it was purchased for exchange or a full refund.

* Never leave lit torch and cylinder unattended. Use torch only in a well-ventilated area.
